

He CAN light up a room

He has cheeks that begged to be pinched and a grin to light up a room.

Mateo was born with a brain injury, and as he grew, it developed into cerebral palsy and epilepsy.

Gillette worked with Mateo's family to design a customized treatment plan that included medication to control his seizures, speech and physical therapy and tests to monitor his progress.

The epilepsy program at Gillette includes dietary treatments, Vagus Nerve Stimulation, cutting edge testing, integrated care and a team of neurologists.

Today, Mateo is blossoming in ways never expected during his first months of life.

For 120 years Gillette has helped kids realize what they CAN achieve.

To read more about the epilepsy program at Gillette and patients like Mateo please visit our website: gillettechildrens.org/epilepsy.
