

*Annika, who has SMA type 1, receives treatment from Gillette neurologist Randal Richardson, MD.*

## Our Research CAN Make a Difference

Gillette Children's Specialty Healthcare provides cutting-edge research to help kids who have spinal muscular atrophy (SMA), muscular dystrophy and other neuromuscular conditions defy expectations.

The Parent Project Muscular Dystrophy recently recognized our expertise, naming Gillette as one of just 16 Certified Duchenne Care Center locations in the U.S.

Our neuromuscular specialists offer integrated care and lead clinical trials of groundbreaking drugs that bring new hope to children.

Gillette and the Muscular Dystrophy Association proudly partner to help kids, like Annika, discover what they CAN achieve.
